

The Bob and Weave In an Orion 7

The blind spot is only moved or expanded.

It is not overcome

The blind spot begins 3' from the driver's eye reference point

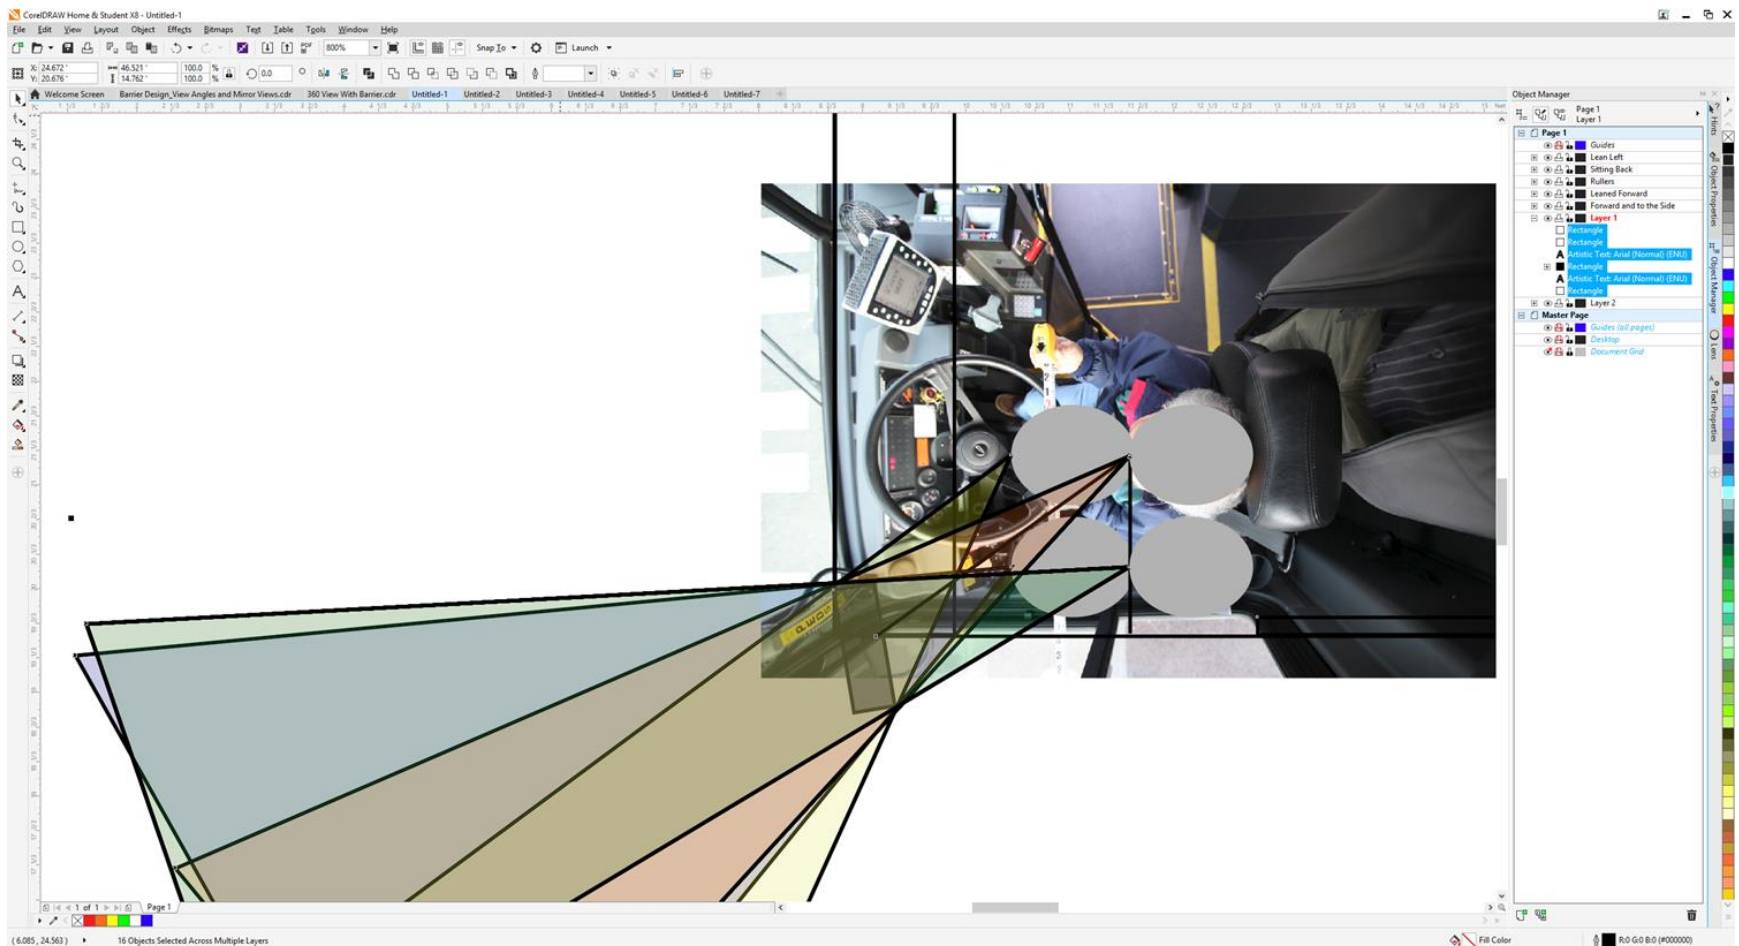

The blind spot is approximately 15" wide

A full lean, constrained by the
huge steering wheel

A layer with driver photo
One more for each head position
The blind angle for each

The real world scale and angles of the blind spots

Now add bus motion, simultaneous pedestrian motion, mirror checks, checking other traffic, etc.
